Overview

One Platform. Endless Possibilities.

TIES (The Integrated Energy System) is an all-in-one platform built to simplify and optimize energy trade and transaction management. From nominations and scheduling to accounting and settlements, TIES gives pipeline and storage operators the tools to eliminate manual tasks, reduce risk, and improve transparency.

While TIES supports all segments – Producers, Gatherers, Plant Processors, Marketers – it delivers exceptional value for Pipeline and Storage Operators.

Built for Pipeline & Storage

Run Lean. Stay Compliant. Optimize Every Move.

Transporting and storing natural gas requires agility, compliance, and razor-sharp logistics.

TIES helps you stay ahead of every nomination, curtailment, and invoice, with everything connected in one system.

Smart Contract Management

Manage transport, wheeling, storage, and park & loan contracts. Automatically apply complex rates and escalations. Stay alert to renewals and key contract dates.

Nominations Management

Support for pathed and non-pathed models. Confirm nominations, apply MDQ logic, and manage primary/secondary service in a single workflow.

Curtailments

Apply system-generated curtailments based on capacity and contractual settings. Auto-notify shippers and override when needed.

Volume Allocations

Allocate daily volumes using your preferred methodology - from standard pro rata to advanced custom models.

Imbalance Monitoring

Whether you're retaining fuel by stated volumes, tiered formulas, or measured data, TIES handles it. Allocate fuel and line loss precisely, and audit the logic behind every retained MMBtu or barrel.

Fuel & Line Loss Allocation

Allocate measured, stated, tiered, or calculated fuel and line loss values - all from a single interface.

Settlement & Invoicing

Auto-generate and distribute invoices, imbalance statements, and volume summaries. Improve turnaround and customer satisfaction.

Shared Power Across All Energy Segments

One System. Multiple Segments. Total Synergy.

TIES supports not only Pipeline & Storage, but also **Producers, Pipelines, Plant Processors, and Marketers** - delivering tools that unify your operations.

Business Associate Management

Keep partner data organized: legal info, credit terms, transaction history, and more.

Price & Rate Administration

Easily apply index-based or formula-based pricing to contracts and transactions.

Contract Administration

Create and track buy/sell, transport, and service contracts with smart rules and alerts.

Infrastructure Management

Track facilities, locations, and interconnects across your network.

Integrated Accounting

Manage invoices, payments, and financial reconciliation in sync with your general ledger.

Standard APIs

Connect TIES with your ERP, pricing, measurement, or 3rd-party systems for seamless data exchange.

Success Story: Scissortail Energy: Streamlining Pipeline and Storage Operations at Scale

Challenge:

Scissortail Energy faced increasing operational complexity after expanding its asset base across multiple basins. Managing nominations, tracking imbalances, and settling invoices across several interconnected pipeline systems was time-consuming and prone to error. Their existing systems lacked flexibility, making it difficult to respond to shifting market demands and operational constraints.

Solution:

By implementing TIES, Scissortail centralized their pipeline and storage operations under a single platform. TIES automated contract management, improved nomination workflows, and provided real-time imbalance visibility, enabling the team to manage logistics and revenue more effectively.

Results:

- Faster nominations and confirmations across multiple shippers
- Reduced manual entry and settlement errors
- Improved visibility into imbalance positions and fuel usage
- Centralized system for managing storage contracts and MDQs

“TIES allowed us to move away from spreadsheets and gain real-time visibility into our pipeline and storage operations. The difference in accuracy and efficiency was immediate.”

—Copano Energy

Experience the Power of TIES Today

TIES gives pipeline and storage operators the flexibility, transparency, and automation needed to stay competitive in today's energy market

Contact us now to schedule a personalized demo and discover how TIES can transform your energy operations and drive success in today's dynamic energy market.
